AUXILIARY KEYBOARD PREPROGRAMMED WITH 30 FUNCTION KEYS AND NUMERIC KEYPAD

for the APPLE II+, IIe and FRANKLIN ACE 1000 + 1200 (others coming)

- Saves time — eliminates need to memorize commands — almost eliminates training time.
- Sharply increases productivity.
- Speeds calc entries or word processing functions.
- 4 arrow keys for cursor positioning.
- Numeric keypad that works with any software program.
- Allows user to concentrate on the power of the software program, not the mechanics of the keystrokes.
- KeyWiz provides those function keys that many other professional systems have.
- Adding function keys to your computer will be the single most important enhancement that you will make.

NOW AVAILABLE (all with numeric keypad)

| • Multiplan | • Applewriter (II+ or IIe) |
| • CalcStar | • Format II |
| • MagicCalc | • Magic Window II |

The KeyWiz 83 is a keyboard designed to reduce the time to teach, learn and use a specific software package. It is also equipped with a numeric keypad which can be used at anytime with any program. Calc entries and template modeling can now be expedited by the use of the 30 specially designed commands. The keys are labeled in plain English. No memorization is necessary. For example, instead of typing three keys to reset the column width, simply push "Column Width" key. What could be easier?

TRADE THIS: /SS /IC /F\$ /E " !
(Multiple strokes)

FOR THIS:
(Single stroke)

Word processing functions, cursor movements and complicated formatting codes have all been condensed with single key commands to assure ease of use. For example: function keys for WordStar allow the user to zip through menus and eliminates the need for "Help" commands on the screen. KeyWiz allows you to preformat your word processing commands and provides the keys to successful computing.

INSTALLATION: KeyWiz is easy to install! APPLE II+ and ACE: Remove case, unplug standard keyboard connection from motherboard socket and plug into our interface cable. Plug other interface cable into motherboard. Interface card can now go into any slot. APPLE IIe: Remove keyboard ROM chip from motherboard. Install our IC socket adapter under the "KR 3600 PRO" IC. Place card into any slot or location desired in computer. No soldering. Installation takes 10 minutes in all cases.

Full 1 Year Warranty
